

ABSTRACT OF THE DISCLOSURE

1
2 An extension structure for a tool includes a main body, a drive rod
3 movably mounted in the main body, an elastic member mounted in the main
4 body and urged between the main body and the drive rod, and a rotation control
5 member rotatably mounted on the main body and rested on the drive rod, so
6 that the drive rod is moved in the main body by rotation of the rotation control
7 member. Thus, the extension structure is assembled easily and quickly and has
8 a rigid construction without detachment.
